***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-3, drawn to a system including an original mapping table and a snapshot mapping table utilizing a snapshot status bit and first allocation bit, classified in class 711, subclasses 161, 162.
- II. Claims 4-5, drawn to a method of creating and destroying a snapshot for on-line backup by locking and unlocking a mapping block, classified in class 711, subclasses 161, 162 and 163.
- III. Claim 6, drawn to a method of performing a write operation to a data block of a volume in a network, classified in class 711, subclasses 161, 162.

2. The inventions are distinct, each from the other because of the following reasons:

3. Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility from inventions II and III such as use in a system to maintain mapping tables of snapshots of a logical volume in network storage. Likewise, invention II has separate utility from inventions I and III, such as in a system for preventing access to a mapping block while a snapshot is either being created or destroyed. Finally, invention III has separate utility from inventions I and II such as a system used to write a data block to a volume stored in a network based on the on the status of mapping bits. See MPEP § 806.05(d).

Art Unit: 2188

4. Because these inventions are distinct for the reasons given above and the search required for any one invention (i.e. invention I) is not required for either of the remaining two inventions (i.e. invention II or invention III), restriction for examination purposes as indicated is proper.
